

## The Internet of Things - A New Challenge in Testing

### Topic (1 hour webinar in English)

An overview on testing of IoT devices by looking at a practical example.

### Target Audience

This webinar is aimed at everyone who works in QA and UX/Usability testing and is interested in learning more about testing IoT software/products.

### Training Objective

Fridges, vacuum cleaners, doors and toothbrushes. The internet has integrated into all aspects of our daily lives. Similarly, intelligent factories and cyber physical systems are evolving our working lives and forming the next industrial revolution known as "Industry 4.0". So, how should we best approach testing IoT software and products? How can we ensure that they function in the real world as they do in laboratory environments?

In this webinar we explain the best practices of IoT testing using a practical example. You will learn how we handle aspects like data security and logistics as well as why the testing of IoT applications is nowadays an absolute must.

### Content

- General introduction of Internet of Things
- Challenges in the market and software testing
- Practical Example: Entertain (Telekom) regarding best practices, challenges, procedures and solutions
- Questions and answers

### Date and time

26th October 2017 at 2.30 pm CET/German time (1.30 pm GMT/UK time)

### Trainer

Markus Steinhauser  
Founder & COO  
Testbirds GmbH

David Lukéle  
Senior QA Project Manager  
Testbirds GmbH

Michael Gater  
Service Launch Manager  
Deutsche Telekom AG
