For immediate release

Crowdtesting provider Testbirds expands its services with automated testing solution TestChameleon

Cloud solution offers fast and secure software testing on virtual machines

MUNICH – Europe's leading crowdtesting provider, Testbirds, announced the arrival of TestChameleon, a new service that enables software testing with virtual machines (VMs). Through the service, companies and organizations are able to extensively test their applications on a wide range of operating systems, without the need of acquiring each environment for in-house testing. In essence, it facilitates them to run tests of their software to analyze for compatibility and inconsistencies. TestChameleon received recognition and support from the German Ministry for Economic Affairs for its development.

Fully customizable testing solution

TestChameleon is a cloud testing solution in which disposable VMs are constructed. The VMs are fully customizable, so clients get unrestricted administrator rights and can install any kind of software for testing purposes; whether it's a single application or an entire .NET Framework. Subsequently, clients can securely run manual tests or automated tests with Selenium or SikuliX scripts. "We have developed TestChameleon in order to fulfill our clients' need for automated testing," says Testbirds co-founder Georg Hansbauer. "It only takes seconds to have a VM up and running and have it adapt to meet specific requirements. All with the flexibility and speed one would expect of a chameleon."

Flexible and secure API

TestChameleon's flexibility is also supported by the fact that access is securely provided to its servers, in full accordance with the customers' IT policies. In addition, the cloud solution can also be offered as an on-premises solution. This way, developers can easily ensure a consistent UX and achieve bug free software on all operating systems, browsers, and associated software. Hansbauer concludes, "We have done quite a few successful implementations of TestChameleon and are now ready to open it up to a larger audience. This is great, because we are eager to improve our TestChameleon API every single day."

About Testbirds GmbH:

Testbirds GmbH is an IT service provider headquartered in Munich, with offices in the UK and the Netherlands. The company specializes in the testing of apps for mobile devices (Apple iOS, Google Android, Windows Mobile, Blackberry OS) as well as web applications (web sites, online shops etc.).

Testbirds uses crowdtesting to gather the feedback of a multitude of external experts as well as focus groups from different backgrounds, bringing a diversity of knowledge, personal interests and life experience to find bugs and usability issues. Together with automated testing service TestChameleon, Testbirds offers extensive software testing solutions.

Companies and organizations that develop applications and websites have a need to test their software in order to improve the usability and eliminate bugs. Testbirds can offer a fast, extensive and cost effective quality assurance for web and native applications through crowd and automated testing.

Testbirds was founded in 2011 and supported by different institutions and partners
